

Subject Overview Computing – Year 11

During the year students will build upon the understanding that they have gained from Year 10. Students will develop an understanding of algorithms and their use in program design. Students will develop their programming knowledge using the Python programming language and learn how to make their programs robust. Students will apply Boolean logic to different programs and investigate the different programming languages and IDE's.

	Half Term 1	Half Term 2	Half Term 3	Half Term 4	Half Term 5	Half Term 6
Knowledge & Skills	Unit 2.1 Algorithms (4 Lessons) Five basic algorithms for searching and sorting data. Use of Pseudocode and flowcharts to represent algorithms Unit 2.2 Programming Fundamentals (4 Lessons) Key constructs in programming. Use of variables. The common arithmetic operators. The common Boolean operators AND, OR, NOT The use of data types Understand how to programmatically implement the key constructs Assessment 1 - Algorithms - Programming Fundamentals	Unit 2.2 Programming Fundamentals (10 Lessons) The use of basic string manipulation. The use of basic file handling operations. The use of records to store data The use of SQL to search for data. The use of arrays (or equivalent) when solving problems, including both one-dimensional (1D) and two-dimensional (2D) arrays Assessment 2 - Systems Architecture - Memory and Storage - Computer networks, connections and protocols - Network Security - Systems Software - Ethical, legal, cultural and environmental impacts of digital technology - Algorithms - Programming Fundamentals - Producing Robust Programs	Unit 2.3 Producing Robust Programs (6 Lessons) Robust programming methods. Implement testing plans and using trace tables. Use of logic to make decisions. Interpret logic diagrams and scenarios Logic diagrams Unit 2.4 Boolean Logic (4 Lessons) Use of logic to make decisions. Interpret logic diagrams and scenarios Logic diagrams Understand Boolean logic Apply Boolean logic Interpret Boolean logic diagram Assessment 3 - Producing Robust Programs - Boolean Logic - Programming languages and Integrated Development Environments	Unit 2.5 Programming languages and Integrated Development Environments (6 Lessons) Types of programming languages and the scenarios in which they are used. Interpreters, Compilers and IDE. Techniques used to develop programming solutions Understand the differences in programming languages Be able to determine when and where to use Identify the features of programming languages Revision & Exam	Revision & Exam
